

• Interdisciplinary Mental Health Team Collaboration

Interdisciplinary Mental Health Team Collaboration

- What Is Interprofessional Collaboration in Healthcare?
- The World Health Organization defines it as “multiple health workers from different professional backgrounds working together with patients, families, carers (caregivers), and communities to deliver the highest quality of care.”

Interdisciplinary Mental Health Team Collaboration

- Teamwork - the combined, co-coordinated & dedicated effort of each & every member of the team toward achievement of the vested interest, target or goal of the team as an entity.
- Teamwork is significant in a mental health setting:
assessment, diagnosis, treatment, in-patient rehabilitation as well as community based rehabilitation of the mentally ill patient.

Multidisciplinary Team (MDT)

- is composed of members from different healthcare professions with specialized skills and expertise.
- composed of members with varied but complimentary experience, qualifications and skills that contribute to the achievement of the organization's specific objectives.
- The members collaborate together to make treatment recommendations that facilitate quality patient care.
- Team functions as an Inter- disciplinary team in that the total care of the patient requires not only the total input of each members of this team but also the inter-disciplinary coordinated effort

Key Components and Benefits

- Comprehensive Care: By combining knowledge, teams can address complex cases more effectively than one provider alone.
- Effective Communication: Success relies on open communication, shared decision-making, and clear roles among members.

Key Components and Benefits

- Improved Outcomes: This approach improves patient safety, reduces stigma, and enhances patient experiences and recovery.
- Team Support: Collaboration helps reduce staff burnout by distributing responsibility and fostering a supportive environment

Benefits and Outcomes

- Improved Patient Safety: Collaboration significantly reduces medical errors, such as misdiagnoses or dangerous drug combinations.
- Holistic Care: Addressing biological, psychological, and social needs together leads to better recovery rates and improved quality of life.
- **Increased Efficiency**: Teams can streamline treatments, reduce duplicate assessments, and shorten hospital stays.
- Staff Morale: Shared decision-making and support from peers help reduce burnout and increase job sat

Psychiatric Mental Health Teams

- Psychiatrists Psychologists Psychiatric Nurses Psychiatric Social Workers Para Professionals

PSYCHIATRIST

doctor

- The psychiatrist is a doctor with post- graduation in psychiatry with 2-3 years of residence training.
- The psychiatrist is responsible for diagnosis, treatment & prevention of mental disorders, prescribe medicines & somatic therapy & function as a leader of the mental health team.

Psychiatric Nurse

- The psychiatric nurse clinical specialist should have a master degree in nursing, preferably with post –graduate research work.
- She participates actively in primary, secondary & tertiary prevention of mental disorder & provides individual, group & family psychotherapy in a hospital & community setting.
- She also takes up the responsibility of teaching, administration & research, besides publishing work in a mental health setting.
- She takes up the role of a leader & can practice independently.

Clinical Psychologist

- The clinical psychologist holds a doctoral degree in clinical psychology & is registered with the clinical psychologist's association.
- She/he conducts psychological, diagnosis tests, interprets & evaluates the finding of these tests & implements a program of behavior modification.

Psychiatric Social Worker

- The psychiatric social worker is a graduate in social work & post-graduate in psychiatric social work.
- She/he assesses the individual, the family & community support system, helps in discharge planning, counseling for job placement & is aware of the state laws & legal rights of the patient & protects these rights.
- She/he is skilled in interview techniques & group dynamics.

-
- A. Occupational Therapist B. Recreational Therapist C. Diversional Play Therapist D. Creative Art Therapist E. Psychiatric Nursing Aids/Attendants F. ECT technicians G. Auxiliary Personnel
- Occupational therapist goes through specialized training.
- He /she has a pivotal role to play by using manual & creative techniques to assess the interpersonal responses of the patient. [?] Patients are helped to develop skill in the area of their choice & become economically independent.
- They are helped to work in sheltered workshop.

- **The recreational therapist** plans activities to stimulate the patient's muscle co-ordination, interpersonal relationship & socialization.
- These approaches are need-based

Diversional Play Therapist

- Makes observation of a child / patient during his play.
- The behavior of the child while playing, the type of toys & his reaction toward the doll, beating, calling or throwing are the focus of attention.
- The therapist explores the behavior of the child & relates to conditions like phobia, child abuse, separation or any other condition.

Creative Art Therapist

- He/she is an art graduate & encourages the patient to express his work freely with colors & analysis the use of various colors, drawing of various scenes etc.
- This therapy helps in diagnosis & also in bringing the repressed feelings of the patient to the conscious level.

Psychiatric Nursing Attendant

- They have high school training & are trained on the job.
- They aid maintaining the therapeutic environment & provide care under supervision.

ECT Technician

- They undergo training for 6-9 months.
- Their function is to assist in ECT.

Auxillary Staff

They are volunteer housekeeper or clerical staff & require in-service education to interact with the patient therapeutically

Extended and Expanded Role of Psychiatric Nurse

- The concept of an extended role means to reach out. It is the extension of the basic caring role. Nurses are assuming their roles in variety of settings.
- Nurse educator
